

# FINANCIAL SERVICES ORGANIZATION

A Global Financial Services Company Upgrades its Archive

## BACKGROUND

This company is a large multinational financial services corporation headquartered in the United States and best known for its credit card and charge card businesses. A UK based division provides global services, including customer communications archiving and e-presentment services, to the entire organization. These platforms are used by worldwide staff to access customer correspondence, and also directly by customers through secure online portals.

### The Challenge

As part of an ongoing review of IT strategy the company evaluated the functionality and cost effectiveness of an existing Systemware solution for customer communications archiving and e-presentment hosted on two zOS mainframes. As a result of this review they decided to replace the Systemware archive with a new platform based on EMC InfoArchive and CrawfordTech PRO Archiver products.

As a credit card processor, the company was subject to PCI data protection rules, so needed to ensure that sensitive customer data is protected when transmitting and accessing files.

### The Solution

EMC InfoArchive was selected as the company's next generation archive platform, and Crawford Technologies' PRO Archiver for InfoArchive was selected as the print stream transformation, indexing and ingestion engine to pump mainframe reports into the new archive. Crawford Tech permits AFP print streams to be stored natively in InfoArchive for compliance purposes and provides efficient conversion into PDF and PDF/A on demand when documents are retrieved. This includes the ability to redact documents when viewed by customer service agents.

CrawfordTech's PRO Lockdown was implemented to encrypt customer data when sending files to other locations or to an outside print provider. With PRO Lockdown, pages can be encrypted and decrypted independent of other pages, guaranteeing security through the entire document management and production process.

## At a Glance

### CrawfordTech Products:

PRO Archiver for InfoArchive and PRO Lockdown

### Objective:

To migrate from a legacy system residing on two zOS mainframes and ensure data security.

### Approach:

PRO Archiver for InfoArchive was implemented and certified on a Red Hat container architecture. PRO Archiver transforms, indexes and ingests files, stores them in native AFP format, and converts on the fly to PDF and PDF/A with redaction. PRO Lockdown is used to encrypt data when transmitting files.

### Results:

- The company saves money because reports and statement do not need to be printed and posted, but instead are digitized and distributed to consumers via web portals and mobile devices. The new solution has successfully replaced legacy archive software and systems infrastructure based on IBM mainframe technology.

As part of the implementation of these new services, the financial services organization engaged Crawford Technologies to provide expert services to support the implementation of PRO Archiver for infoArchive. They worked closely with EMC and company resources to migrate the archive without disrupting ongoing processes.

## Results

The company selected EMC and CrawfordTech's solution because they understood that InfoArchive could not only support the short-term report archiving requirements, but would also support long term application decommissioning and structured data archiving requirements. Ultimately the solution saves money because reports and statement do not need to be printed and posted, but instead are digitized and distributed to consumers via web portals and mobile devices. In particular the new solution replace legacy archive software and systems infrastructure based on IBM mainframe technology.

## CrawfordTech Solutions

Crawford Technologies develops software and solutions to help enterprises optimize and improve the secure and accessible delivery, storage and presentment of their customer communications.

With over 1,800 customers on six continents, CrawfordTech solutions and know-how enable the largest banks, insurers, healthcare providers, utilities and print services companies to use their existing technologies, documents and data in new ways. We help them navigate the challenges in leveraging legacy applications in the platforms and applications of the future.

CrawfordTech's products, services and domain expertise reside at the nexus of content, data, and output management and are essential components of our customers' digital transformation, output management and document accessibility strategies.
